

LyteBridge 2009

Dynamic Discovery & Redirection Services

LyteBridge Services 2009

By Lytecube Technologies [www.lytecube.com]

The no nonsense discovery and redirection service. Lightweight and simple to use, the perfect service to make your business applications available over the internet. No need of dedicated server hardware or complex technology. Works seamlessly with WebServices built using LyteRAD.

Why LyteBridge?

The answer in one word is simplicity. If you are a small business or startup, managing complex technology to make your service available over the internet is no easy task. LyteBridge makes it as simple as having an account and starting your web enabled application. LyteBridge does all the magic of registering and deregistering your applications and making them accessible over the internet.

Easy Setup

You do not need a static IP or a dedicated server to run your applications, you can use your laptop to host your application and roam about your WiFi network with no interruptions in online access, its that simple.

Multiple Applications and Users

Run any number of web enabled applications under one account identity and have them available to every member of your team or yourself. You will be provided a customizable company home page that will list all your online applications for easy access,

Dynamic Discovery

Watch your applications come online as you start them up. LyteBridge will automatically discover any new services you start under an account identity and make it available on your company home page. Applications and services that go offline for any reason will be automatically disabled on your access page.
